

Foreword

The descriptions and service procedures contained in this manual are based on designs and methods studies carried out up to December 2012.

The products are under continuous development. Vehicles and components produced after the above date may therefore have different specifications and repair methods. When this is judged to have a significant bearing on this manual, an updated version of this manual will be issued to cover the changes.

The following levels of observations, cautions and warnings are used in this Service Documentation:

Note: Indicates a procedure, practice, or condition that must be followed in order to have the vehicle or component function in the manner intended.

Caution: Indicates an unsafe practice where damage to the product could occur.

Warning: Indicates an unsafe practice where personal injury or severe damage to the product could occur.

Danger: Indicates an unsafe practice where serious personal injury or death could occur.

D

The diagram illustrates the electrical control system for the AdBlue tank. It is organized into four vertical sections (A, B, C, D) and four horizontal sections (0, 1, 2, 3).

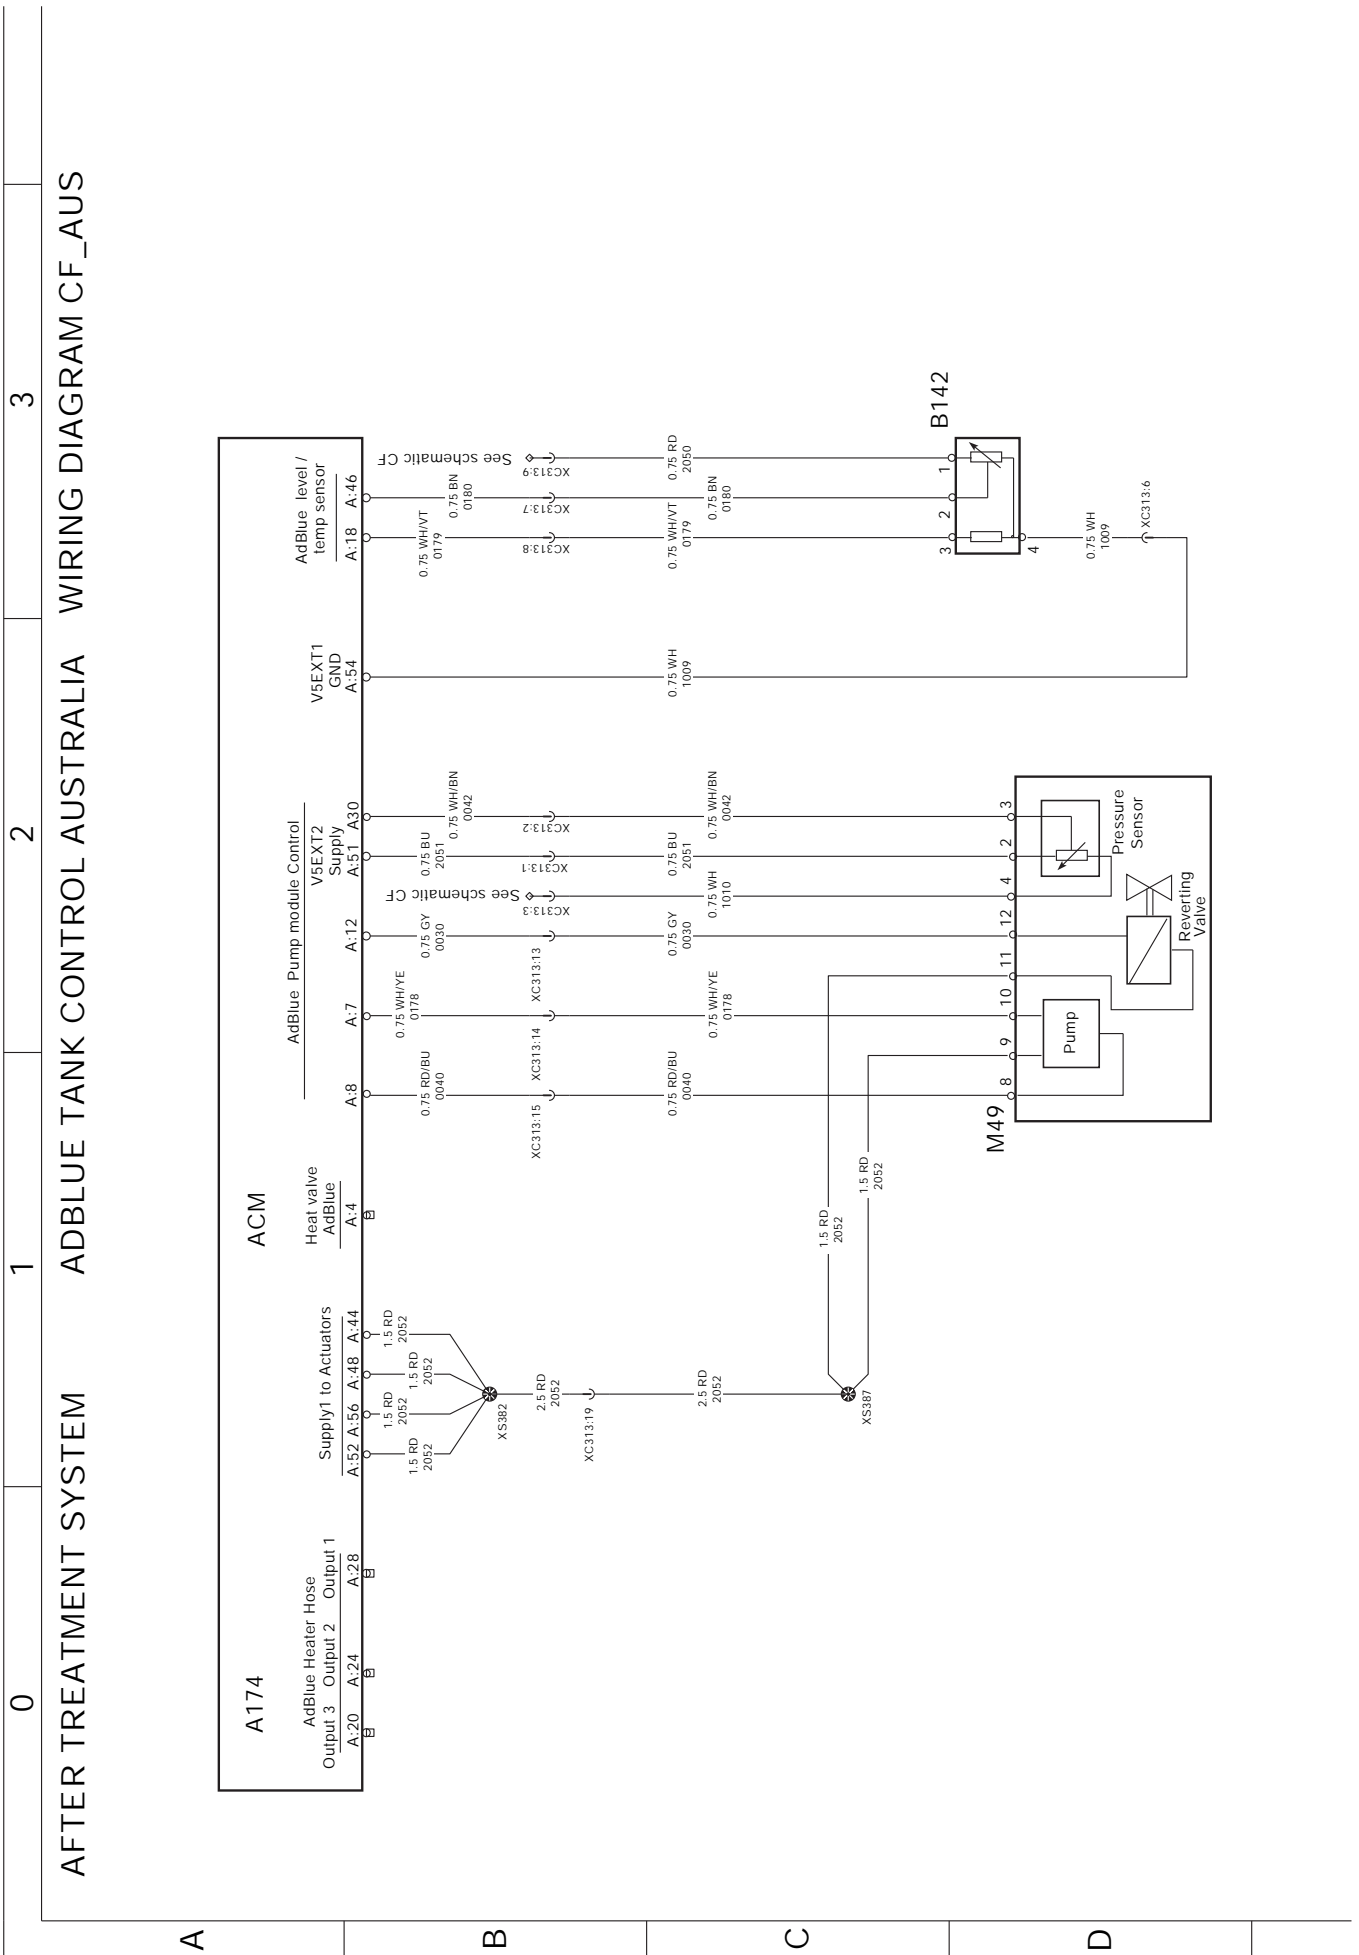

- Section A (ACM):** Contains the AdBlue Heater Hose (A174) with outputs 1, 2, and 3. It also includes the AdBlue Pump module control (V5FX12) and the Heat valve (A-4).
- Section B:** Shows the supply to actuators (A-52 to A-56) and the AdBlue level/temperature sensor (A-18, A-46). It details the wiring for various relays (XC313:18 to XC313:21) and solenoid valves (DK:1 D, DK:1 A, DK:2 B).
- Section C:** Details the AdBlue Pump module control (A-7 to A-12) and the supply to actuators (A-52 to A-56). It shows the wiring for relays (XC316:13 to XC316:16) and solenoid valves (DK:1 A, DK:1 B, DK:1 C).
- Section D:** Shows the final control elements, including the Pump, Reversing Valve, Pressure Sensor, and solenoid valves (Y81, B142, B247). It also shows the connection to the AdBlue level/temperature sensor (A-18, A-46) and the AdBlue level/temperature sensor (A-18, A-46).

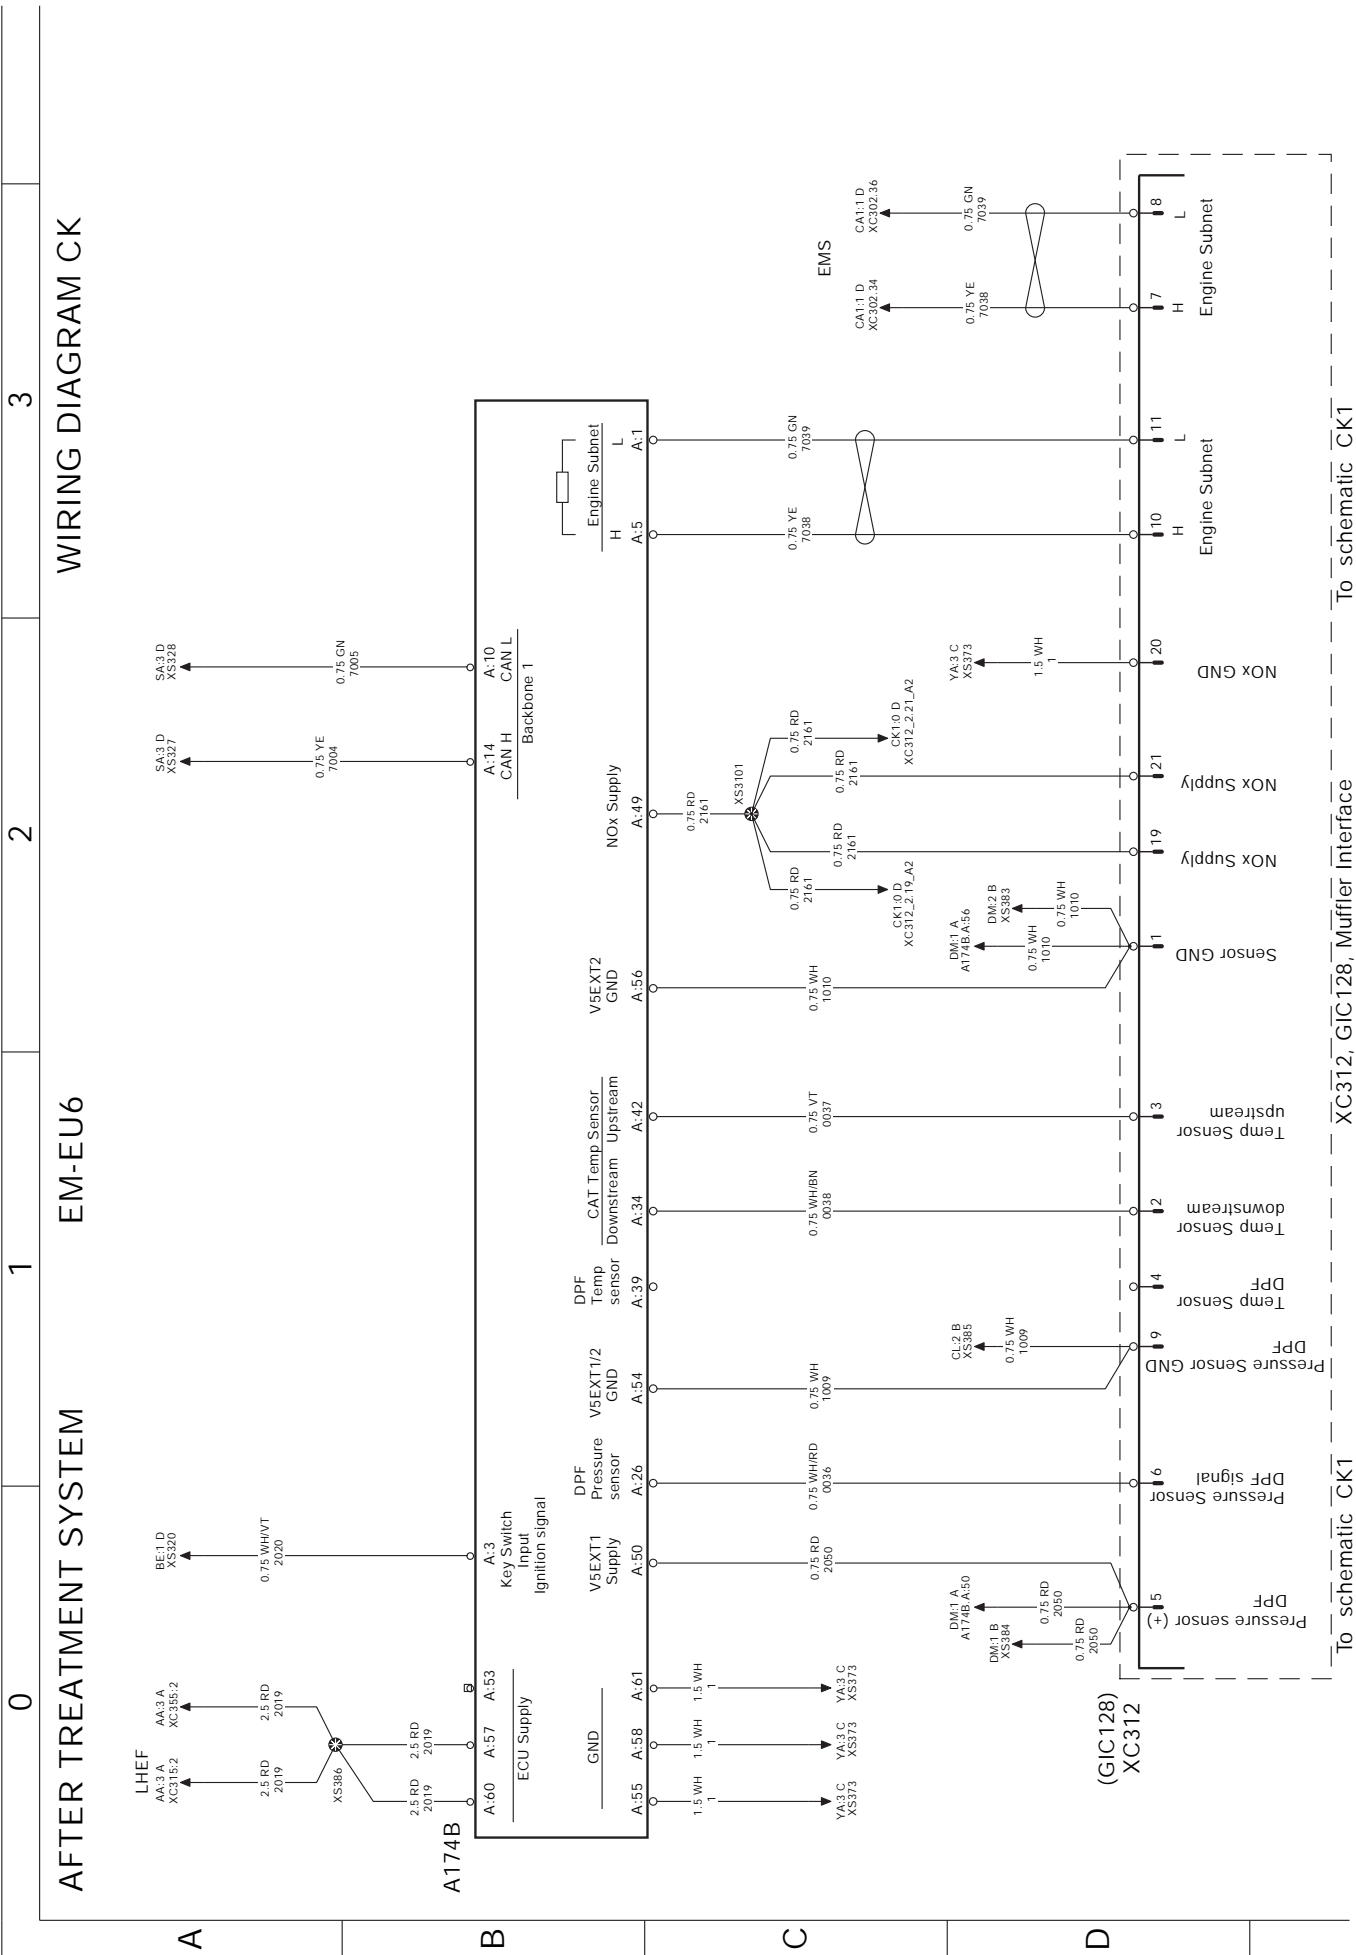

The diagram uses standard electrical symbols for relays, solenoid valves, pumps, and sensors. Wire colors and gauges are indicated throughout the circuit.

ADBLUE TANK CONTROL, EM-EU6

WIRING DIAGRAM CL

A174B

The diagram illustrates the electrical control system for the Adblue tank. It features several input and output terminals on the left, connected to various components on the right:

- Terminals A:28 to A:32:** Adblue Heater Hose Output 2 (RD/GY), Adblue Heater Hose Output 1 (WH/BU), and Supply to Urea Hoses (RD, BU, YE).
- Terminals A:35 to A:47:** Air Control Valve Temp (BU), Urea Temp (WH), Urea pressure (GY), and Air Pressure (YE).
- Terminals A:46 to A:51:** Adblue level/temp sensor (WH/BN, WH/VT, GY).
- Terminals A:54 to A:62:** Supply to Urea Loads (RD, BU, YE).

Key components and their connections include:

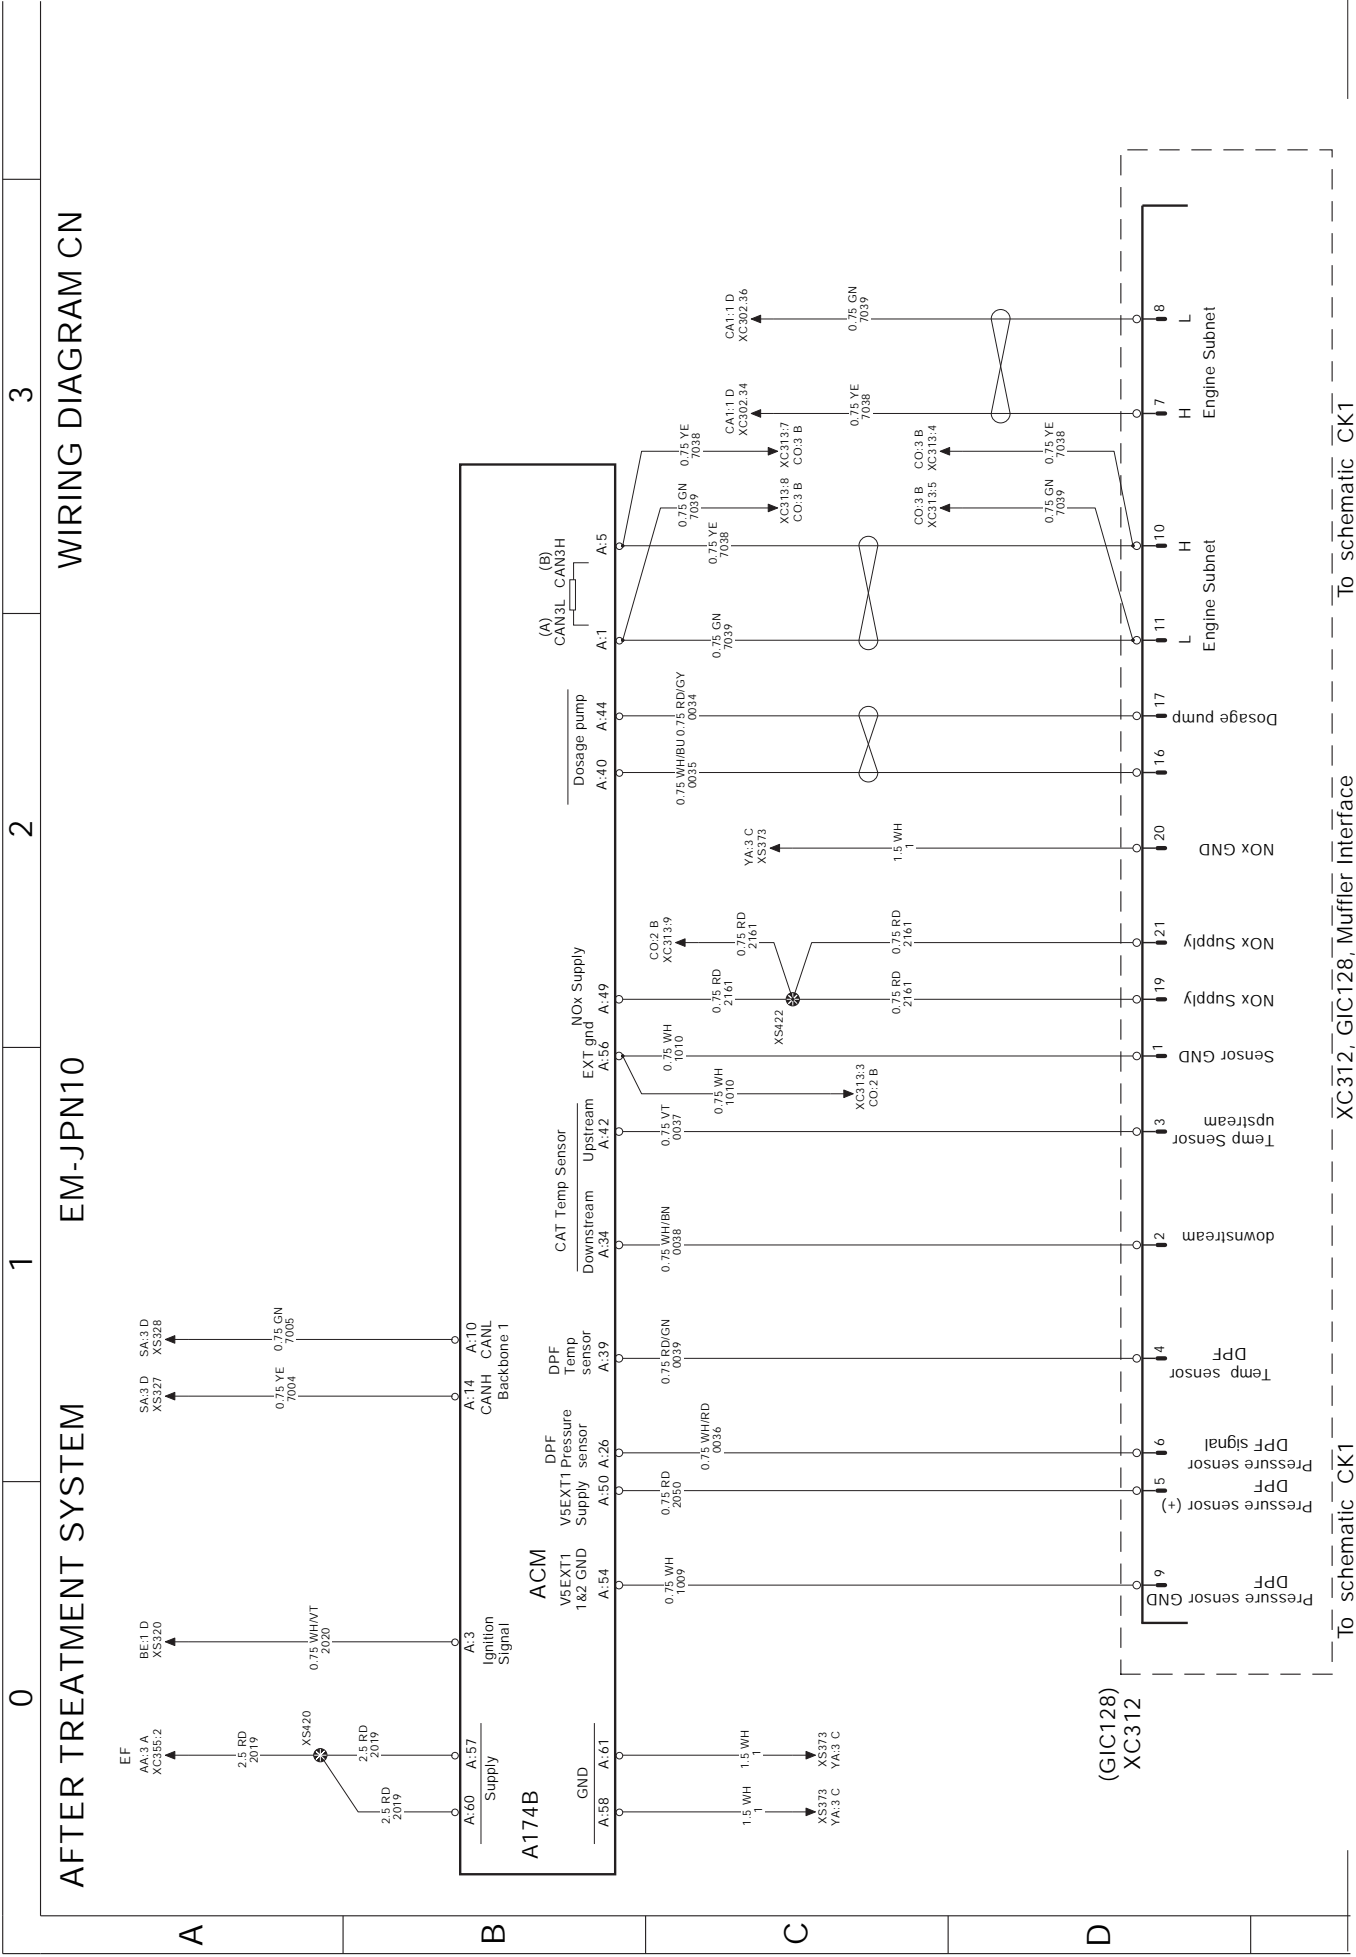

- Heaters:** R56A (YELLOW Euro6) and R57A (BLACK) are controlled by terminals A:32 and A:33.
- Valves:** Air valve (A190) and Urea valve (Y81C) are controlled by terminals A:35 and A:36.
- Sensors:** Urea level sensor (B142B) and Air pressure sensor (B262, B263) are connected to terminals A:46 and A:47.
- Pumps:** Urea pump (B262) and Air pump (B263) are controlled by terminals A:51 and A:47.
- Motor:** Motor M73 is controlled by terminals A:28 and A:29.

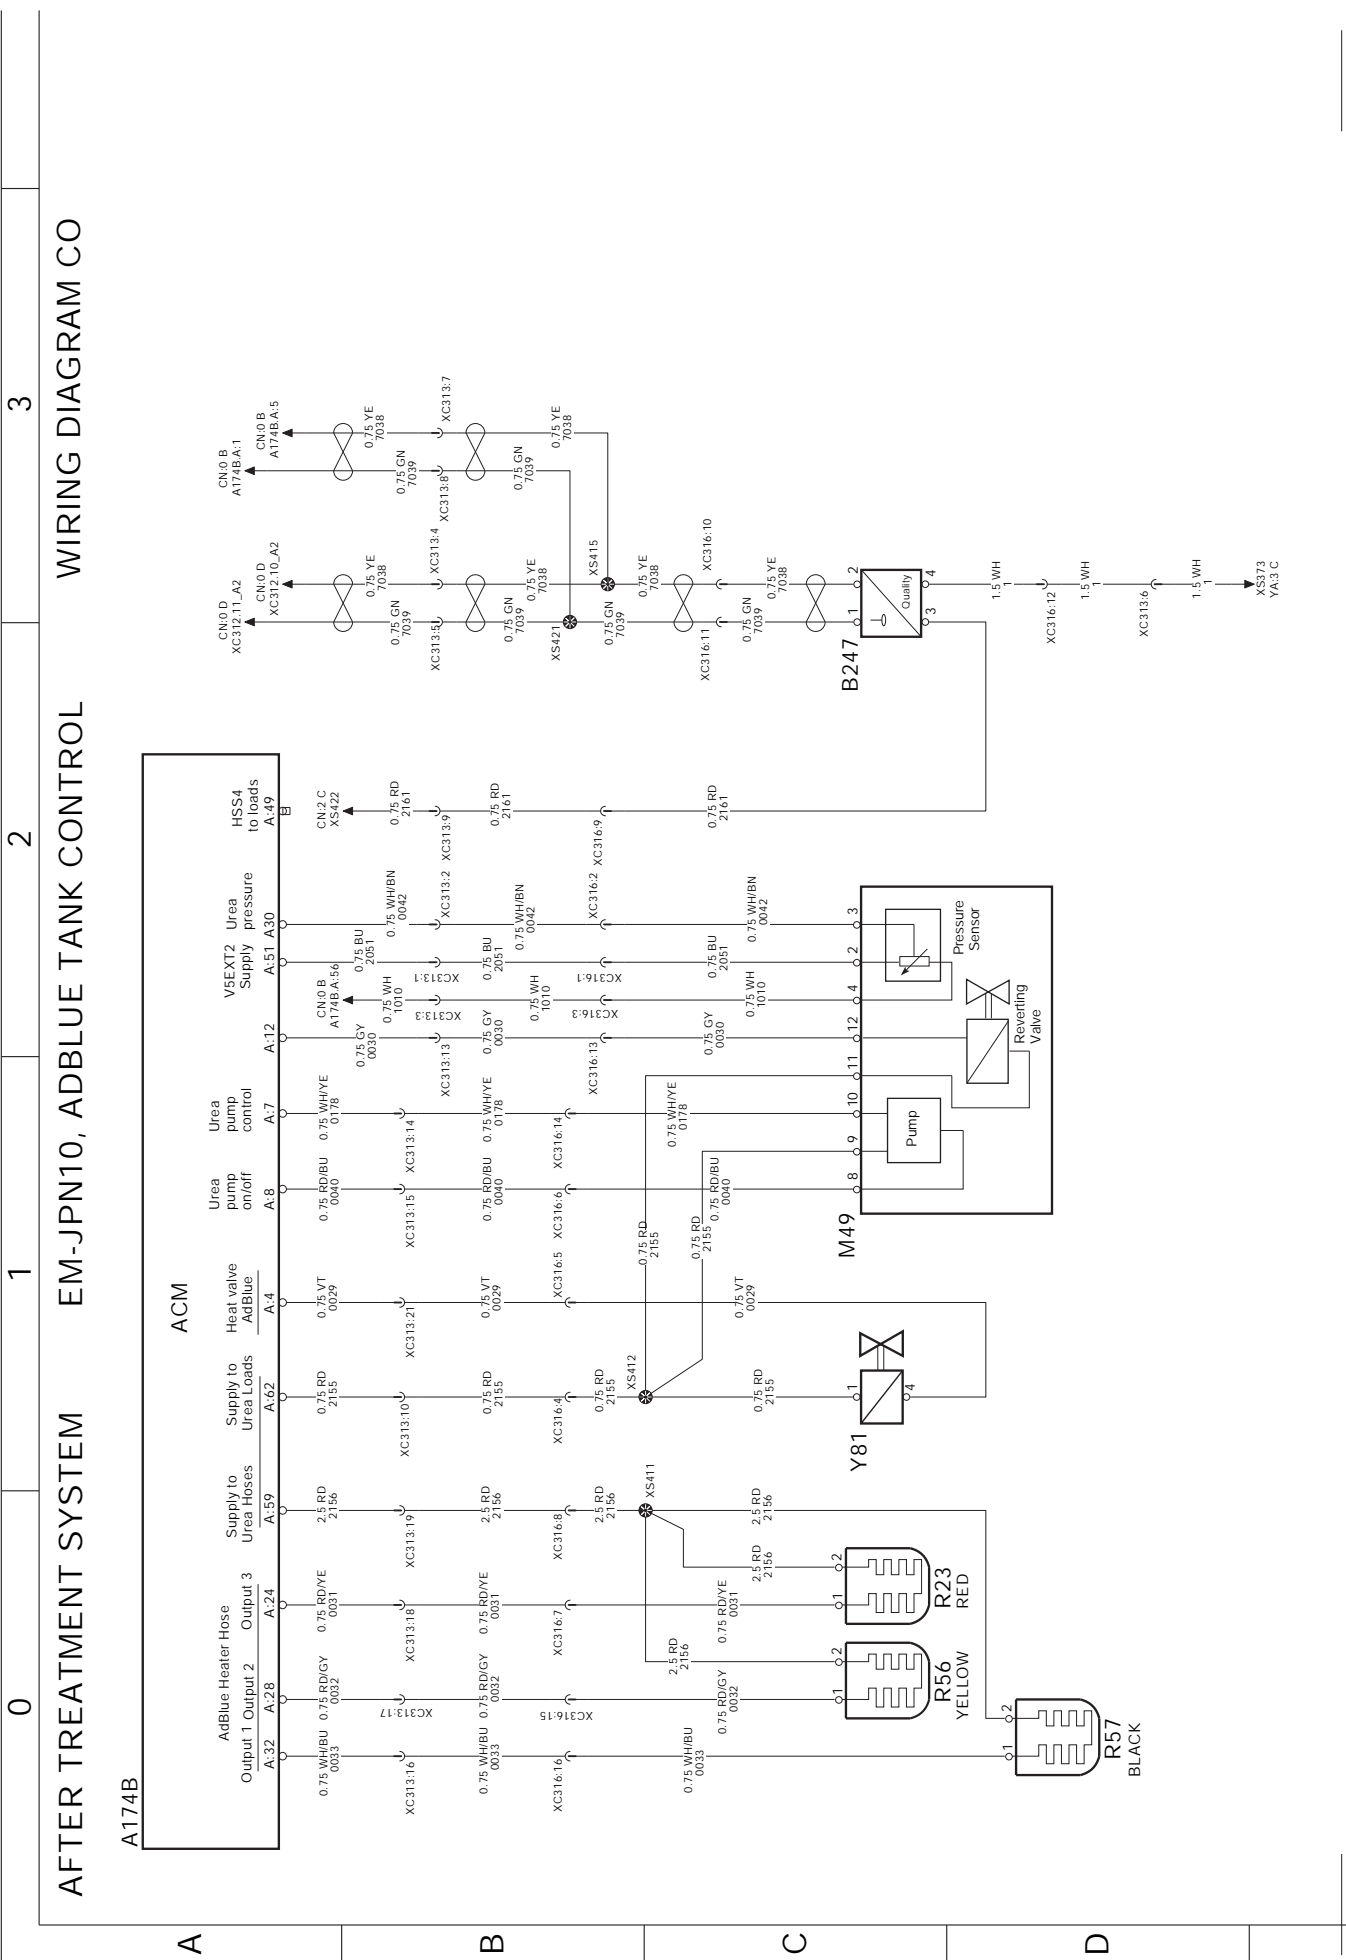

The diagram uses standard electrical symbols for relays (XC), pumps (P), valves (V), sensors (S), and heaters (H). Wire colors and gauges are specified throughout the diagram.
