Foreword

The information in this manual is based on present design in April 2009.

The products are under continuous development. This may effect the correctness of the information in this manual. If the differences are significant, new editions of this manual will be released to cover the changes.

Placement of intermediate connector pieces and control units on the chassis

See also, 300, Component placement, Description, Design and function

The reader is advised that printed copies are uncontrolled.

The illustration shows in principle how the chassis cabling is routed and where the intermediate connector pieces, control units and electrical distribution units are located. If the vehicle is not built by a Volvo body builder, then the cabling to the lamps is probably routed in another way than shown in the illustration. The dashed lines show alternative cable routings.

¹ The illustrations show examples of the appearance of the components

1 (driver environment)

The illustration shows in principle how the chassis cabling is routed and where the intermediate connector pieces, control units and electrical distribution units are located. The dashed lines show alternative cable routings. The illustration is used for both right-hand drive and left-hand drive vehicles, where of certain components are drawn in two places.

Note: The table includes components that the vehicle is not equipped with.

X903	 A grey, rectangular component box with a handle on top. The word "VOLVO" is printed on the front. A metal terminal is attached to the front face.
X904	 A grey, rectangular component box shown from a side perspective, highlighting its depth and the mounting tabs on the side.
X905	 A grey, rectangular component box with three red cables connected to it. One cable enters from the left, and two exit from the bottom.
