

## CASE IH & NEW HOLLAND Tractor Fault Codes DTC

- TMF 3 Hitch Raise Solenoid High Side Driver shorted to 12 volts.
- TMF 4 Hitch Raise Solenoid Failed Open or Shorted to Ground.
- TMF 5 Hitch Lower Solenoid Shorted to 12 volts.
- TMF 6 Hitch Lower Solenoid High Side Driver circuit short to 12 volts.
- TMF 7 Hitch Raise/Lower Solenoids Open or short to ground.
- TMF 11 Communications Lost with Data Bus and ALL other controllers
- TMF 12 Communication lost with the armrest controller
- TMF 14 5 Volt Sensor Supply voltage is too high
- TMF 15 5 Volt Sensor Supply voltage is too low
- TMF 17 Hitch Position Command potentiometer failed in the Armrest controller
- TMF 18 Hitch Rockshaft Position potentiometer is outside normal operating range.
- TMF 19 Hitch Upper Limit potentiometer is failed in the Armrest Controller
- TMF 21 Hitch Load Command potentiometer is failed in the Armrest Controller
- TMF 22 Single draft pin sensor failed when configured for one draft pin sensor.
- TMF 23 Two draft pin sensors failed when configured for two draft pins.
- TMF 24 Communications Lost with Instrumentation Controller
- TMF 25 Hitch Up/Down Switch failed in the Armrest controller
- TMF 26 Fender UP and DOWN switch failure or both switches simultaneously pressed
- TMF 28 Hitch Travel potentiometer is failed in the Armrest Controller
- TMF 29 Hitch Drop Rate potentiometer is failed in the Armrest Controller
- TMF 30 Right Draft Pin voltage is outside the normal operating range.
- TMF 31 Left Draft Pin voltage is outside the normal operating range.
- TMF 32 Ground Speed Signal is failed in the Instrumentation Controller
- TMF 33 Hitch Slip Set Switch failed in the Armrest controller
- TMF 34 Hitch Slip Select Switch failed in the Armrest controller
- TMF 35 Slip Sensor (radar or wheel speed) is failed in the Instrumentation Controller
- TMF 37 The ARU reports EDC Transport Lock is faulty or not available.
- TMF 41 Draft pin(s) detected but the Armrest controller specified tractor without draft control.
- TMF 42 Engine speed must be set above 1600 rpm during calibration of lower valve.
- TMF 43 No Draft pin(s) detected but the Armrest controller specified tractor with draft control.
- TMF 44 Hitch calibration aborted due to tractor movement.
- TMF 45 Hitch calibration attempted when the engine is not running or engine speed signal is failed.
- TMF 47 Raise Valve calibration value is too high. (valve problem)
- TMF 48 Raise Valve calibration value is too low. (valve problem)
- TMF 50 Hitch position at top of travel is not within specification during calibration
- TMF 51 Lower Valve calibration value is too high. (valve problem)
- TMF 52 Lower Valve calibration value is too low. (valve problem)
- TMF 53 The time allowed for hitch calibration has expired
- TMF 54 Hitch position at bottom of travel is not within specification during calibration
- TMF 55 Hitch position range from top to bottom is not within spec during calibration
- TMF 56 Hitch position range to position command range ratio is not within spec during calibration.
- TMF 57 Right Draft Pin voltage is not within spec for  $\tilde{A}^-$ no load $\tilde{A}^{\square}$  condition during calibration
- TMF 58 Left Draft Pin voltage is not within spec for  $\tilde{A}^-$ no load $\tilde{A}^{\square}$  condition during calibration
- TMF 59 Both Draft Pin voltages are not within spec for  $\tilde{A}^-$ no load $\tilde{A}^{\square}$  condition during calibration
- TMF 60 Draft pin connected to left vs right for single pin setup during calibration
- TMF 61 The Hitch Calibration procedure must be performed.
- TMF 62 Communications Lost with Performance Monitor Function

- TMF 63 Controller 8 volt reference is too high (above 8.8 volts).
- TMF 64 Controller 8 volt reference is too low (below 7.2 volts).
- TMF 65 Battery Voltage is too Low
- TMF 66 Battery Voltage is too Low
- TMF 80 MFD fault condition in software.
- TMF 81 MFD Solenoid is failed Open or Short Circuit
- TMF 82 Differential Lock Solenoid is failed Open or Short Circuit
- TMF 83 Brake Lamp Relay Solenoid is failed Open or Short Circuit
- TMF 86 Wheel Slip Signal is failed in the Instrumentation Controller
- TMF 87 Ground Speed Signal is failed in the Instrumentation Controller
- TMF 88 Differential Lock Switch is failed in the Armrest Controller
- TMF 89 Differential Lock Switch is failed in the Armrest Controller
- TMF 90 Differential Lock Switch is failed in the Armrest Controller
- TMF 92 MFD Switch is failed in the Armrest Controller
- TMF 93 MFD Switch is failed in the Armrest Controller
- TMF 94 Differential Lockout fault condition in software.
- TMF 95 The steering angle sensor is above the expected operating range
- TMF 96 The steering angle sensor is below the expected operating range
- TMF 98 Battery Voltage is too Low
- TMF 99 Battery Voltage is too Low
- TMF 106 Aux 5th remote valve control switch (Extend) is failed in the Armrest Controller
- TMF 107 Aux 5th remote valve control switch (Retract) is failed in the Armrest Controller
- TMF 108 Aux 1st remote valve LEVER potentiometer is failed in the Armrest Controller
- TMF 109 Aux 2nd remote valve LEVER potentiometer is failed in the Armrest Controller
- TMF 110 Aux 3rd remote valve LEVER potentiometer is failed in the Armrest Controller
- TMF 111 Aux 4th remote valve LEVER potentiometer is failed in the Armrest Controller
- TMF 112 Aux 1st remote valve FLOW potentiometer is failed in the Armrest Controller
- TMF 113 Aux 2nd remote valve FLOW potentiometer is failed in the Armrest Controller
- TMF 114 Aux 3rd remote valve FLOW potentiometer is failed in the Armrest Controller
- TMF 115 Aux 4th remote valve FLOW potentiometer is failed in the Armrest Controller
- TMF 116 Aux 5th remote valve FLOW potentiometer is failed in the Armrest Controller
- TMF 120 Electro Hydraulic Remote top link switch is stuck on.
- TMF 123 Aux 1st Lower Coil solenoid shorted to 12 volts.
- TMF 124 Aux 1st Lower solenoid failed open or short circuit.
- TMF 125 Aux 1st Raise Coil solenoid shorted to 12 volts.
- TMF 126 Aux 1st Raise solenoid failed open or short circuit.
- TMF 127 Aux 2nd Lower Coil solenoid shorted to 12 volts.
- TMF 128 Aux 2nd Lower solenoid failed open or short circuit.
- TMF 129 Aux 2nd Raise Coil solenoid shorted to 12 volts.
- TMF 130 Aux 2nd Raise solenoid failed open or short circuit.
- TMF 131 Aux 3rd Lower Coil solenoid shorted to 12 volts.
- TMF 132 Aux 3rd Lower solenoid failed open or short circuit.
- TMF 133 Aux 3rd Raise Coil solenoid shorted to 12 volts.
- TMF 134 Aux 3rd Raise solenoid failed open or short circuit.
- TMF 135 Aux 4th Lower Coil solenoid shorted to 12 volts.
- TMF 136 Aux 4th Lower solenoid failed open or short circuit.
- TMF 137 Aux 4th Raise Coil solenoid shorted to 12 volts.
- TMF 138 Aux 4th Raise solenoid failed open or short circuit.
- TMF 139 Aux 5th Lower Coil solenoid shorted to 12 volts.
- TMF 141 Aux 5th Raise Coil solenoid shorted to 12 volts.
- TMF 142 Aux 5th Raise solenoid failed open or short circuit.
- TMF 147 Implement feedback #1 out of range High

- TMF 148 Implement feedback #1 out of range Low
- TMF 149 Implement feedback #2 out of range High
- TMF 150 Implement feedback #2 out of range Low
- TMF 151 Communications Lost with Transmission Controller
- TMF 152 Electro Hydraulic Remote top link switch voltage is short circuit.
- TMF 153 Electro Hydraulic Remote top link switch data invalid
- TMF 154 PTO switch interlock - Cab Switch and Fender switch on at the same time.
- TMF 155 Auto PTO switch data failed in the Armrest controller.
- TMF 156 Auto PTO switch stuck ON in Armrest Controller.
- TMF 157 PTO remote fender switch short circuit.
- TMF 158 PTO remote fender switch open circuit
- TMF 159 PTO remote fender switch stuck ON.
- TMF 160 PTO Clutch is Slipping Too Much
- TMF 162 Engine Stalled when the PTO was running.
- TMF 163 PTO Shaft rotation is detected when the PTO clutch is OFF.
- TMF 164 PTO shaft speed has not been detected within 3.6 seconds of being turned ON.
- TMF 165 PTO Shaft rotation is detected when the Engine is OFF.
- TMF 166 PTO Driver is on and no current is sensed.
- TMF 167 Current sensed when the PTO driver is off.
- TMF 168 PTO ON/OFF switch is failed in the Armrest Controller
- TMF 169 PTO ON/OFF switch is failed in the Armrest Controller
- TMF 170 PTO ON/OFF switch is failed in the Armrest Controller
- TMF 171 PTO software fault condition detected.
- TMF 172 PTO Solenoid Circuit is failed shorted to 12 Volts when PTO is in the off state.
- TMF 173 PTO Solenoid Circuit is failed shorted to ground when PTO is in the off state.
- TMF 174 Current flowing in the PTO sense resistor when the high side is off.
- TMF 175 PTO Clutch has not reached lock up speed within 6 seconds of being turned ON
- TMF 178 PTO speed sensor has been changed.
- TMF 179 The PTO is receiving no frequency from the Shaft Size Sensor on a two speed PTO
- TMF 180 The PTO is receiving signals from the Shaft Size Sensor on a single speed PTO configuration.
- INST 1015 Seat Switch may be stuck closed.
- INST 1024 Trans oil filter switch shorted to ground on power up.
- INST 1034 Hydraulic oil filter switch shorted to ground on power up.
- INST 3010 PTO Shaft Speed sensor is failed in PTO Controller
- INST 3020 Engine Speed sensor is failed in the Engine Controller
- INST 3022 Engine Overspeed Error
- INST 5010 Engine Oil Pressure sensor is failed in the Engine Controller
- INST 5011 Engine Oil Pressure sensor voltage is too low (open circuit, short to ground)
- INST 7024 Reversible Fan Control open circuit or shorted to ground.
- INST 10031 Controller Memory Error - Loss of Engine Hours information
- INST 10032 Controller Memory Error - Loss of Vehicle Configuration information
- INST 10033 Controller Memory Error - Loss of Customer Configuration information
- INST 10034 Controller Memory Error: Loss of valid fuel table information.
- INST 10035 Controller Memory Error - Loss of Valid Radar Configuration information.
- INST 10036 Controller Memory Error - Loss of Displayed Performance information
- INST 10037 Controller Memory Error - Loss of Implement Width information
- INST 10038 Controller Memory Error - Loss of Valid Remote Timer information.
- INST 11011 Fuel Level Sensor voltage is too low (open circuit, short to ground)
- INST 12011 Communications Lost with Armrest Controller
- INST 12021 Communications Lost with Auxiliary Controller
- INST 12031 Communications Lost with Hitch Controller

INST 12043 Communications Lost with Data Bus 1 and ALL other controllers  
INST 12051 Communications Lost with PTO Controller  
INST 12053 Communications Lost with Vehicle Data Bus 2.  
INST 12071 Communications Lost with Transmission Controller  
INST 12091 Communications Lost with Engine Controller  
INST 12101 Communications Lost with Tractor ECU (Gateway) Controller  
INST 12111 Communications Lost with Automatic Temperature Controller  
INST 12121 Communications Lost with Color Performance Monitor  
INST 13010 Engine Coolant Temperature sensor is failed in the Engine Controller  
INST 13011 Engine Coolant Temperature sensor voltage is too low (short to ground)  
INST 13012 Engine Coolant Temperature sensor voltage is too high (open circuit, short to +V)  
INST 13021 Transmission Oil Temperature sensor voltage is too low (short to ground)  
INST 13022 Transmission Oil Temperature sensor voltage is too high (open circuit, short to +V)  
INST 13031 Hydraulic Oil Temperature sensor voltage is too low (short to ground)  
INST 13032 Hydraulic Oil Temperature sensor voltage is too high (open circuit, short to +V)  
INST 13040 Air to Air Intake Temperature sensor is failed in the Engine Controller  
INST 13044 When fuel shut off relay is latched, short is detected (mechanical engine tractors only)  
INST 13051 Air to Air Intake Temperature sensor voltage is too low (short to ground)  
INST 13052 Air to Air Intake Temperature sensor voltage is too high (open circuit, short to +V)  
INST 53001 Instrumentation Controller Configuration is Incorrect  
INST 53002 Air to Air Intake sensor does not match Tractor Model Configuration  
INST 53005 Engine Shutdown activated by Instrument Controller  
INST 65535 NO ERROR. Errors have not been cleared from factory.  
ATC 111 Cab sensor open or shorted to power  
ATC 112 Cab sensor shorted to ground  
ATC 115 Evaporator sensor open or shorted to power  
ATC 116 Evaporator sensor shorted to ground  
ATC 120 Blower speed select pot open/shorted to power  
ATC 121 Temperature select pot open/shorted to power  
ATC 122 Mode Select Pot Open Or Shorted To Power  
ATC 125 High pressure switch (+) input shorted to power  
ATC 126 High pressure switch (+) input shorted to ground  
ATC 127 High pressure switch (-) input shorted to power  
ATC 128 High pressure switch (-) input shorted to ground  
ATC 129 High pressure cycling error (2 in 1 minute)  
ATC 130 Low pressure switch (+) input shorted to power  
ATC 131 Low pressure switch (+) input shorted to ground  
ATC 132 Low pressure switch (-) input shorted to power  
ATC 133 Low pressure switch (-) input shorted to ground  
ATC 134 Low pressure switch open for > 1 minute  
ATC 113 Outlet sensor open or shorted to power  
ATC 114 Outlet sensor shorted to ground  
ATC 117 Outside air sensor open or shorted to power  
ATC 118 Outside air sensor shorted to ground  
Hitch 1002 Raise hitch valve coil short to 12 volts or raise hitch valve coil circuit failure.  
Hitch 1003 Open or Short to Ground raise hitch valve coil circuit failure.  
Hitch 1004 Lower hitch valve coil short to 12 volts or lower hitch valve coil circuit failure.  
Hitch 1005 Open or short to ground lower hitch valve coils.  
Hitch 1006 EDC Low Side Driver stuck on failure.  
Hitch 1007 Low side driver watchdog test failed.  
Hitch 1008 Low side of raise solenoid connected permanently to GND

- Hitch 1009 Low side of lower solenoid connected permanently to GND
- Hitch 1011 TCU (Tractor Controller Unit) is disconnected from the CAN bus.
- Hitch 1012 No communication with the ACM (Armrest Controller Module).
- Hitch 1013 No communication with the ICP (Instrument Cluster Panel).
- Hitch 1014 Five-volt reference is above the upper voltage limit.
- Hitch 1015 Five-volt reference is below the lower voltage limit.
- Hitch 1016 Not implemented
- Hitch 1017 Position Command value received over the CAN data bus from the Armrest indicates Position Command potentiometer failed.
- Hitch 1018 Hitch rockshaft position potentiometer open/short/misadjust or circuit failure.
- Hitch 1019 Upper Limit value received from CAN data bus indicates failure condition.
- Hitch 1021 Load Command value received from CAN data bus indicates failure condition.
- Hitch 1022 Single draft pin sensor failed when configured for one draft pin sensor.(CCH Only)
- Hitch 1023 Two draft pin sensors failed when configured for two draft pins.(CCH Only)
- Hitch 1024 ICU CAN data bus signal lost.
- Hitch 1025 Up/Down/Down Momentary switch value received from CAN data bus indicates switch failure.
- Hitch 1026 Up/Down remote fender switch failure.
- Hitch 1027 Not implemented
- Hitch 1028 Travel Range potentiometer value received from CAN data bus indicates failure condition.
- Hitch 1029 Drop Rate value received from CAN data bus indicates potentiometer failure condition.
- Hitch 1030 Right draft pin voltage is outside the normal operating range.(CCH Only)
- Hitch 1031 Left draft pin voltage is outside the normal operating range.(CCH Only)
- Hitch 1032 Ground speed failure-value received from CAN data bus indicates failure condition.
- Hitch 1033 Slip Limit Set Point received from CAN data bus indicates failure condition.
- Hitch 1034 Slip Enable switch received from CAN data bus indicates failure condition.
- Hitch 1035 The Percent slip received from ETC indicates failure condition.
- Hitch 1036 The ARU reports EDC Inching Up switch faulty or not available.
- Hitch 1037 The ARU reports EDC Inching Down switch faulty or not available.
- Hitch 1065 The ARU specified tractor without draft control (position only hitch) but detected presence of draft pin(s).
- Trans 2009 Seat switch open circuit
- Trans 2010 Seat switch is shorted to the supply voltage B+ or 5 volt reference
- Trans 2011 Clutch Pot Open Circuit or short to ground
- Trans 2012 Clutch Potentiometer Short to +12 Volts or short to 5 Volt reference.
- Trans 2024 none of the Transmission clutches are calibrated. This will be the condition when a new controller is installed on the tractor.
- Trans 2037 Bottom of Clutch pedal switch open circuit or bottom of clutch relay is stuck open
- Trans 2047 Clutch pedal bottom of clutch switch misadjusted.
- Trans 2048 Bottom of Clutch pedal switch or the bottom of clutch relay are short circuit
- Trans 2049 Trans
- Trans 2054 5 volt reference voltage too low.
- Trans 2055 No signal from wheel speed sensor.
- Trans 2056 5 volt internal reference voltage too high.
- Trans 2057 5 volt internal reference voltage too low.
- Trans 2059 1) Switch inputs indicate shuttle lever is in both forward and neutral 2) Switch inputs indicate shuttle lever is in both reverse and neutral 3) Switch inputs indicate shuttle lever is in both forward and reverse. Cycle the shuttle lever which may free up stuck switches, or try driving the opposite direction.
- Trans 2071 Forward switch input from the FNR Pod is shorted to ground or is open circuit.

- Trans 2072 Reverse switch input from the FNR Pod is shorted to +12 Volts or the FNR Pod 5 Volt Reference.
- Trans 2073 Reverse switch input from the FNR Pod is shorted to ground or open circuit.
- Trans 2074 FNR Not Park Switch low voltage fault
- Trans 2075 FNR Not Park Switch high Voltage fault
- Trans 2110 FNR Neutral Switch Low Voltage fault
- Trans 2111 FNR Neutral Switch high Voltage fault
- Trans 2326 The Engine RPM sourced from the alternator measured by the controller is excessively high.
- Trans 2327 No engine RPM
- Trans 2330 The Transmission output RPM speed, sourced from the sensor, measured by the controller is too high for the desired gear
- Trans 2331 The transmission clutches are slipping
- Trans 2342 Clutch Odd solenoid open circuit or short to ground.
- Trans 2343 Clutch Even solenoid open circuit or short to ground.C33
- Trans 2344 Clutch C1-2 solenoid open circuit or short to ground.
- Trans 2345 Clutch C3-4 solenoid open circuit or short to ground.
- Trans 2346 Clutch 5-6 solenoid open circuit or short to ground.
- Trans 2374 Master Clutch solenoid open circuit or short to ground.
- Trans 2347 Clutch Low Range solenoid open circuit or short to ground.
- Trans 2348 110 Clutch Mid Range solenoid open circuit or short to ground.
- Trans 2349 Clutch High Range solenoid open circuit or short to ground.
- Trans 2350 Clutch reverse solenoid open circuit or short to ground.
- Trans 2351 The creeper clutch solenoid is open circuit or short to ground
- Trans 2353 Even Clutch Solenoid is shorted to +12 Volts, current sensed while driver is off.
- Trans 2352 Odd Clutch Solenoid is shorted to +12 Volts, current sensed while driver is off.
- Trans 2354 C1-2 Clutch Solenoid is shorted to +12 Volts, current sensed while driver is off..
- Trans 2355 C3-4 Clutch Solenoid is shorted to +12 Volts, Current sensed while driver is off.
- Trans 2356 C5-6 clutch Solenoid is shorted to +12 Volts, current sensed while driver is off.
- Trans 2357 Low clutch Solenoid is shorted to +12 Volts, current sensed while driver is off.
- Trans 2358 Mid Clutch Solenoid is shorted to +12 Volts, Current sensed while driver is off.
- Trans 2359 High Clutch Solenoid is shorted to +12 Volts, current sensed while driver is off.
- Trans 2360 Reverse Clutch Solenoid is shorted to +12 Volts, current sensed while driver is off.
- Trans 2361 The creeper clutch solenoid is shorted to +12 Volts, current sensed while the driver is off
- Trans 2362 Master Clutch Solenoid is shorted to +12 Volts, current sensed while driver is off.
- Trans 2363 The Odd Clutch is not calibrated
- Trans 2364 Even Clutch not calibrated
- Trans 2365 C1-2 Clutch not calibrated
- Trans 2366 C3-4 Clutch not calibrated
- Trans 2367 C5-6 Clutch not calibrated
- Trans 2368 Low Range Clutch not calibrated
- Trans 2369 Mid Range Clutch not calibrated
- Trans 2370 High Clutch not calibrated
- Trans 2371 Reverse Clutch not calibrated
- Trans 2372 Creep Clutch is not calibrated
- Trans 2373 Master Clutch not calibrated
- Trans 2800 Auto Guidance Isolation valve driver Fault
- Trans 2805 System pressure valve solenoid circuit is open circuit or shorted to ground
- Trans 2806 System pressure solenoid is shorted to B+
- Trans 2807 Transmission output rpm over speed
- Trans 2809 The battery voltage is too low to permit operation of the clutch solenoids.

Trans 2811 Transmission Oil Temperature Hot  
Trans 2812 Transmission Oil Temperature sensor short to B+ or open circuit  
Trans 2813 Transmission oil temperature Sensor Short to Ground  
Trans 2814 Integrated Control Panel off line  
Trans 2815 Governor Engine RPM alternator engine RPM mismatch  
Trans 2816 Transmission regulated pressure accumulator is flat  
Trans 2817 Governor is offline CAN bus  
Trans 2818 Communication lost with the Armrest Control Module(ACM)  
Trans 2819 Communication lost with the instrumentation controller.  
Trans 2820 System pressure low possible System pressure hydraulic pump failure or leak  
Trans 2821 System Pressure Low fault  
Trans 2850 The Park Brake is stuck on by no electrical power supplied when commanded on  
Trans 2851 The Park Brake Driver has detected an over current or an open circuit condition  
Trans 2852 The Park Brake is stuck on by no electrical power supplied to the solenoid when driver is commanded on. Possible service brake bottom brake switches open.  
Trans 2055 No signal from wheel speed sensor.  
Trans 2873 Software is out of the calibration mode and the park brake request is still active. If this fault is detected there is a bug in the software  
Trans 2874 The park brakes commanded on and gear is engaged and there is no park brake request from calibration. If this fault is detected there is a bug in the software  
Trans 2900 Torque sensor Gap is on the larger end of the tolerance (CCH Only)  
Trans 2901 Signal received from the torque sensor is not in any fault range or normal range tolerance (CCH Only)  
Trans 2902 Torque sensor has declared an internal fault tolerance (CCH Only)  
Trans 2903 Torque sensor supply voltage below 4.8 volts tolerance (CCH Only)  
Trans 2910 12VF1 voltage supply is low. (possible blown fuse\*)  
Trans 2911 12VT1 voltage supply is low. (possible blown fuse\*)  
Trans 2912 12VF2 voltage supply is low. (possible blown fuse\*)  
Trans 2913 12VH voltage supply is low. (possible blown fuse\*)  
Trans 2914 12VF3 voltage supply is low. (possible blown fuse\*)  
Trans 2915 12VS1 voltage supply is low. (possible blown fuse\*)

Rear PTO 5005 PTO remote fender switch short(CCH Only)  
Rear PTO 5006 PTO remote fender switch open(CCH Only)  
Rear PTO 5007 PTO remote fender switch stuck on(CCH Only)  
Rear PTO 5008 Both PTO On and Off switches are simultaneously on. One of the PTO switches is short to 12 volts.  
Rear PTO 5009 PTO solenoid open circuit or shorted to ground or AD12vs2 voltage is low.  
Rear PTO 5010 PTO solenoid circuit shorted to B+ when PTO is in the off state.  
Rear PTO 5011 Driver is on and no current is sensed.  
Rear PTO 5012 PTO clutch is slipping excessively for the duration of 5 seconds or longer.  
Rear PTO 5013 Engine speed is too low for the PTO to be in the  $\tilde{A}^- \text{on} \tilde{A}^+$  state.  
Rear PTO 5014 PTO is commanded off but the PTO speed greater than zero.  
Rear PTO 5015 The software has not detected PTO shaft speed for greater than 3 seconds since the PTO initial fill vale was commanded  
Rear PTO 5016 PTO speed is detected when the PTO is in the off state without engine RPM.  
Rear PTO 5017 PTO clutch did not lock up after 6 seconds of clutch motion.  
Rear PTO 5018 PTO speed sensors wiring swapped (CCH Only)  
Rear PTO 5019 PTO is configured as a two speed and no shaft size frequency was detected when the PTO was switched on. (CCH Only)  
Rear PTO 5020 PTO is configured as a single speed and the shaft size frequency was detected when the PTO was switched on. Shaft size frequency input is only used for two speeds PTO.(CCH Only)  
Rear PTO 5021 Auto PTO disabled(CCH Only)  
Rear PTO 5022 PTO switch is in the on position when the engine is off.  
Rear PTO 5023 PTO clutch lube solenoid circuit shorted to B+ when PTO is in the off state.(4WD Only)  
Rear PTO 5024 PTO clutch lube solenoid open circuit or shorted to ground or +12 VF3 voltage is low.(4WD Only)  
Rear PTO 5025 Rear PTO  
Rear PTO 5027 Low side of PTO solenoid connected permanently to GND

Rear PTO 5028 Clutch speed sensor open or short to Vbat  
Rear PTO 5029 Clutch speed sensor short to GND  
Rear PTO 5030 Shaft size speed sensor open or short to Vbat(CCH Only)  
Rear PTO 5031 Shaft size speed sensor short to GND(CCH Only)  
Rear PTO 5032 12VF3 voltage supply is low. (possible blown fuse\*)  
MFD/Diff Lock 6001 MFD (CCH) or Front Diff Lock (4WD) solenoid failed. Possible Failure modes: 1. Solenoid coil failed 2. Damaged wiring 3. Loose connector or bent pin 4. TCU Internal failure  
MFD/Diff Lock 6002 Rear Diff Lock solenoid failed. Possible Failure modes: 1. Diff Lock solenoid coil failed 2. Damaged wiring 3. Loose connector or bent pin 4. TCU Internal failure  
MFD/Diff Lock 6003 Brake light relay fault. 1. Short to 12 volts 2. Open circuit or short to ground.  
MFD/Diff Lock 6004 CAN-BUS indicating Rear Diff Lock Switch failed in the armrest. Possible failure modes: 1. Rear Diff Lock Switch failed in Armrest 2. Auto Diff Lock Switch failed in Armrest (CCH Only) 3. Communication problems between the TCU controller and the Armrest controller  
MFD/Diff Lock 6005 Rear Differential Lock and Auto Differential Lock (Only CCH): 1. Diff Lock On and Auto Diff Lock switches are both active  
MFD/Diff Lock 6006 CAN-BUS indicating MFD (CCH) or Front Diff Lock (4WD) Switch failed in the armrest. Possible failure modes: 1. MFD (CCH) or Front Diff Lock (4WD) failed in Armrest 2. Auto MFD Switch failed in Armrest, (CCH). 3. Communication problems between the TCU controller and the Armrest  
MFD/Diff Lock 6007 Both MFD and Auto MFD switches active fault  
MFD/Diff Lock 6008 Steering angle sensor above maximum voltage limit.  
MFD/Diff Lock 6009 Steering angle sensor below minimum voltage limit.  
MFD/Diff Lock 6010 12VS1 voltage supply is low. (possible blown fuse\*)  
MFD/Diff Lock 6011 12VS2 voltage supply is low. (possible blown fuse\*)  
Front PTO 8001 Front PTO cab switch is on during tractor power up.  
Front PTO 8002 Front PTO cab switch open  
Front PTO 8003 Front PTO cab switch short  
Front PTO 8004 Front PTO solenoid open circuit or shorted to ground or AD12VU2 voltage is low.  
Front PTO 8005 Front PTO solenoid circuit shorted to B+ when Front PTO is in the off state.  
Front PTO 8006 Low side driver is stuck on and no current is sensed.  
Front PTO 8007 Front PTO switch is in the on position when the engine is off.  
Front PTO 8010 12VU2 voltage supply is low. (possible blown fuse\*)  
Front Suspension 10001 Front suspension Pump Not tank Valve solenoid is open circuit or shorted to ground  
Front Suspension 10002 Front suspension rod Side Valve solenoid is open circuit or shorted to ground  
Front Suspension 10003 Front suspension piston Side Valve solenoid is open circuit or shorted to ground  
Front Suspension 10004 Front Suspension Position sensor out of Range High Error  
Front Suspension 10005 Front Suspension Position sensor out of Range Low Error

NH 14015 The ADIC 5 volt reference voltage is too low - below 4 volts  
NH 14016 The ADIC 5 volt reference voltage is too high - above 6 volts  
NH 14021 Radar Ground speed short to VCC or open circuit  
NH 14022 Radar Ground speed short to Ground  
NH 14031 Front PTO speed short to VCC or open circuit  
NH 14032 Front PTO speed short to Ground  
NH 14041 Engine coolant temp short to VCC or open circuit  
NH 14042 Engine coolant temp short to Ground  
NH 14051 Fuel level sensor short to VCC or open circuit  
NH 14052 Fuel level sensor short to Ground  
NH 14061 Air brake pressure short to VCC or option set but sensor not connected  
NH 14071 Front Hitch Position short to 12 or 5 Volts  
NH 14072 Front Hitch Position short to Ground or open circuit  
NH 14081 Engine oil pressure short to 12 or 5 Volts  
NH 14082 Engine oil pressure short to Ground or open circuit  
NH 14091 Transmission output speed short to VCC or open circuit  
NH 14092 Transmission output speed short to Ground  
NH 14100 Air brake pressure not configured  
NH 14101 Fuel contaminated sensor Not connected  
NH 14200 EEPROM error  
NH 14900 Transmission module missing (DA/DB/DE/DF).  
NH 14901 Engine controller not present (EDC7)  
NH 14902 Auxiliry (optional) Controller Module missing (DD/DH).  
NH 14903 SCM controller missing (GA 12x12 only).  
NH 14904 Arm Rest Module (ARU) missing. (Steyr 16x16 only)  
NH 14905 KEYPAD missing  
NH 14906 Fast Steer Controller (KA) missing.  
NH 14907 DOG (Display Of Gears) missing.  
NH 15001 Exceeding safe operating wheel speed (10 km/h) with system still enabled or still active. Error code not active fast steer lamp flashes instead.  
NH 15002 Steering wheel control proximity sensor open circuit.  
NH 15003 Steering wheel control proximity sensor short circuit.  
NH 15006 Split valve LVDT open circuit.  
NH 15007 Split valve LVDT short circuit.  
NH 15008 Change valve Solenoid open circuit  
NH 15009 Change valve Solenoid short circuit across  
NH 15010 Safety switch Fail  
NH 15011 Maximum engagement time (5 minutes) elapsed.  
NH 15012 Split Valve spool stuck open  
NH 15013 Change valve or Split valve spools Stuck closed.  
NH 15014 Split Valve spool stuck in transition zone cant identify which steering mode the tractor is definitely in.  
NH 15015 Cold oil, temperature below 5 degrees C. Error code not active fast steer lamp flashes instead.  
NH 15024 System not calibrated.
